SUMMARY

Highly motivated Computer Science graduate with hands-on experience spanning backend engineering, full-stack application development, and applied AI systems. Proficient in Golang, Python, and Vue.js, designing responsive user interfaces, and developing automation systems. A adaptable programmer passionate about writing clean, optimized code and delivering complete, end-to-end software solutions.

INTERNSHIP EXPERIENCES

Backend Developer Co-op Intern at Botnoi Consulting (May - Oct 2025)

- Developed a Retrieval-Augmented Generation (RAG) pipeline using Python for an insurance broker chatbot, enabling it to answer FAQs by integrating internal knowledge bases.
- Developed a JWT-based authentication system, including user login, token generation, and request authorization.
- Developed a web-based management dashboard using Vue.js and Golang APIs, integrating Google Sheets to automate document ingestion and vector database updates.
- Automated data ingestion pipelines via scheduled cron jobs and web scraping using Python, ensuring the vector database remained constantly synchronized with live external data.
- Collaborated with cross-functional teams, including DevOps and Frontend team, to ensure seamless integration and project delivery.
- Implemented a SAML-based Single Sign-On system using Golang, seamlessly integrating with enterprise Identity Providers (Microsoft ADFS) to centralize access control and significantly reduce login friction for internal staff.

PROJECTS

Multi-Agent Chatbot for Computer Department (Python, Golang, Vue.js)

- Developed a Python-based multi-agent chatbot for LINE and Facebook Messenger, supporting both text and image-based replies, integrating a RAG pipeline and semantic caching, with system performance evaluated via Ragas.
- Developed RESTful APIs using Golang to handle document ingestion from the admin portal, seamlessly managing file uploads and data synchronization across databases and storage systems.
- Designed the UX/UI and developed the frontend using Vue.js for an admin portal, enabling staff to efficiently upload and manage the chatbot's knowledge base.
- Managed system infrastructure by containerizing applications with Docker and deploying the end-to-end solution on an Ubuntu server environment.

Movies & Series Mobile Application (Flutter)

- Built a cross-platform application using Flutter. Integrated the TMDB RESTful API to dynamically render media metadata, trailers, and user reviews for iOS and Android.

File Transfer System (Java)

- Implemented a client-server file transfer system in Java leveraging the Zero-Copy mechanism, significantly reducing CPU overhead and memory consumption during large-file transmissions.

Instant Noodle E-commerce Platform (PHP)

- Created a PHP and SQL-based e-commerce website featuring an end-to-end checkout workflow and an administrative dashboard for inventory and order management.

EDUCATION

Bachelor of Science in Computer Science, Silpakorn University (2022 - 2026)

- GPA: 3.58/4.00 (Second Class Honors)

SKILLS

Programming Languages: Python, Golang, Java, C, PHP, Dart

Frontend & Mobile: Vue.js, Flutter, HTML, CSS, Bootstrap 5, Tailwind CSS

AI & LLM Ecosystem: Prompt Engineering, RAG, Multi-Agent, LangChain, OpenAI API, Ollama

Databases & Storages: MongoDB, MySQL (Basic SQL Queries), Redis, Qdrant, Pinecone, FAISS, MinIO, AWS S3, GCS

Other Tools: Docker, Linux, Git (GitHub, GitLab), RabbitMQ, Postman, Miro, Figma, Cron Job

Languages: Thai (Native), English (B2 / TOEIC 845)
